CONDUCTORS

Cosmetics?

Beauty Technology is:

a wearable computing subfield that uses the **body surface** as an interactive platform by integrating **technology** into **beauty products** to be applied directly to one's skin, fingernails, and hair.

Conductive Makeup

What if you could active the world with just a wink?

Katia Vega, Tricia Flanagan

Collaboration with Felipe Esteves

FX e-makeup

Could your skin become an interface?

Winkymote

Kinisi

"Could your skin act as an interface?"

Kinisi could change the world with a smile, a wink, raising her eyebrow and closing her lips.

Video:

TechNails

Imagine that you don't need a card for opening your door, or for paying for the metro. Just point and have it, **everything at your fingertips**: your nails.

Fashionable, inexpensive and wireless devices attached to fingernails in order to interact with the ambient in different ways.

Twinkle Nails.
Play in the air...

Gimmickiano.
Play through your body...

Collaboration with Maribel Tafur

AquaDJing.

Play through water...

Hair

Unconscious Auto-contact Behaviors

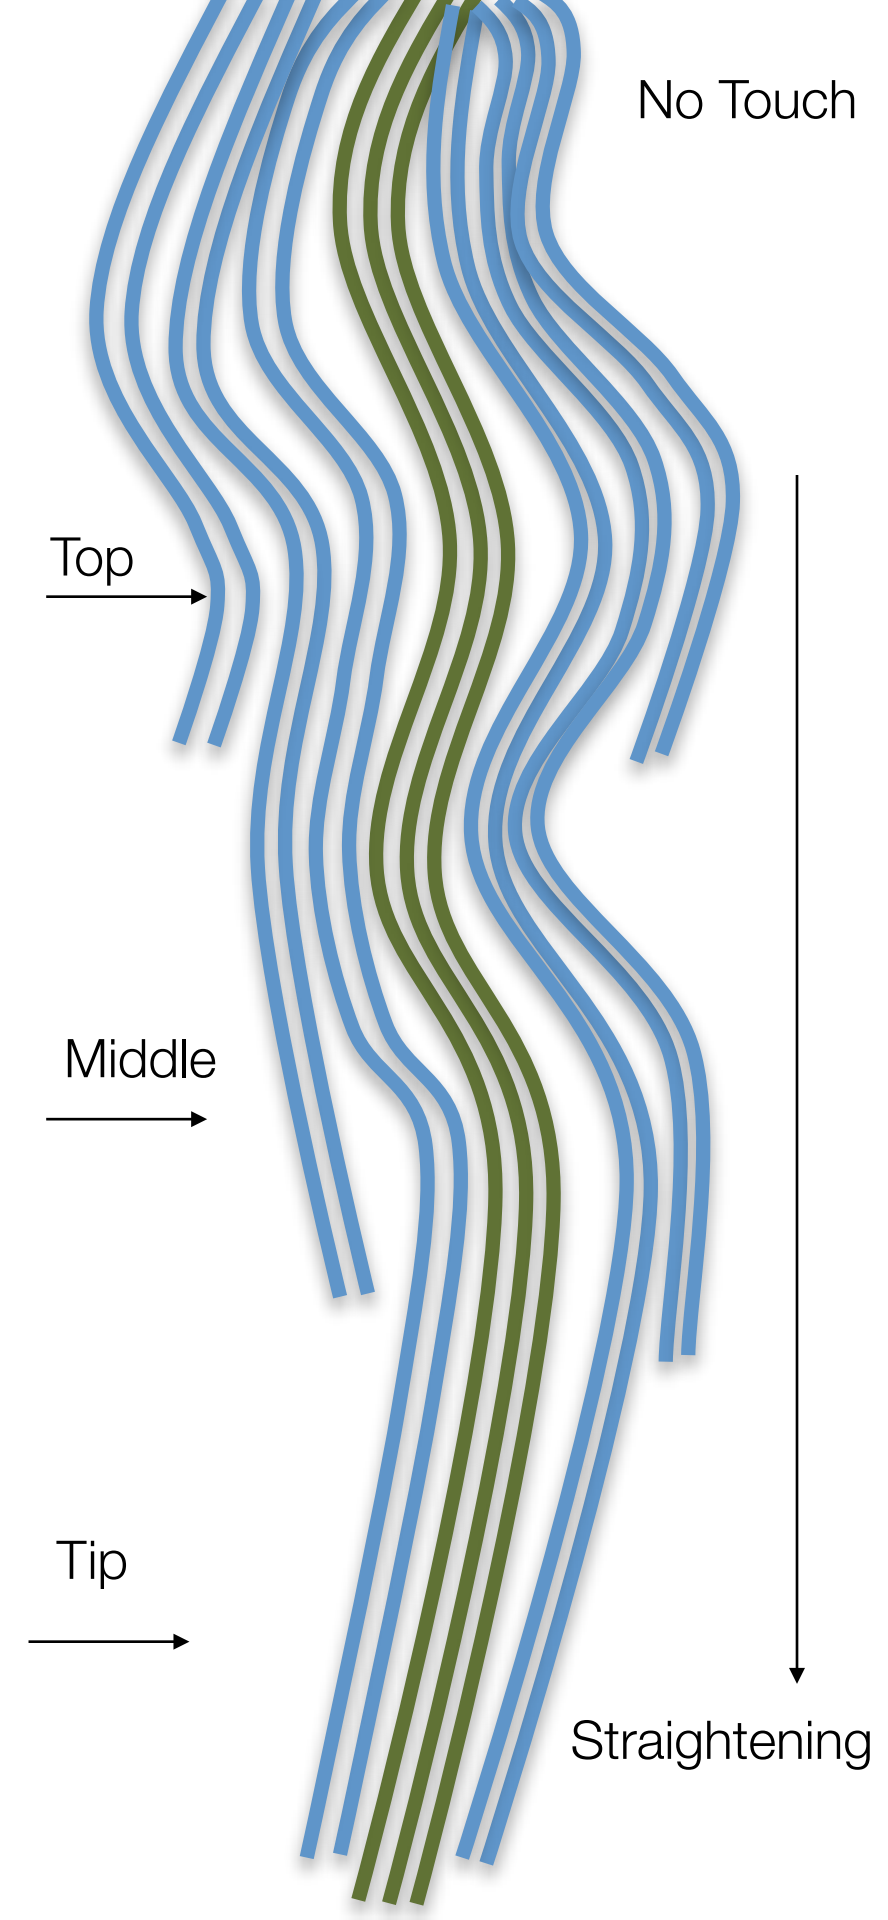

Hairware.- ... connects chemically metalized hair extensions to a microcontroller turning it into an input device for triggering different objects.

Capacitor Sensor Values in the different touches

- Non conductive Hair Extension. 3 layers 
- Conductive Hair Extension 

HAIRWARE

the power of your hair

Carnival Masks

- interactive masks that lights
with the music beats -

Could you change your makeup?

...automatically?

Chromoskin

Chromoskin is an interactive eye shadow that dynamically changes colours leveraging the skin as a display.

Beauty Technology

Skin

Nails

Hair

- Beauty Technology: Wearable Computing subfield.
- Towards interactive cosmetics
- Novel materials.
- Different contexts: medical, arts, music, theatre...

on-skin rapid prototyping

First Option
my first skin interface

Inspiration

Carnival Masks

- interactive masks that lights
with the music beats -

Katia Vega, Xin Liu
MIT Media Lab

Workshop materials

Participant materials

- 1 Adafruit GEMMA board or Arduino Pro Mini
- 3 Adafruit FLORA NeoPixels
- 1 Coincell battery holder
- 2 CR2032 batteries

Collaborative tools

- Thin wire
- Wire strippers, flush snips, and tweezers
- Soldering iron and solder
- E6000 craft glue
- Liquid latex and sponge applicators

We are lighting up
our skin masks!

Electronics

LEDs, fine wires, insulation

FX-makeup

liquid latex, skin glue, glitter

Step 1. Plan it!

more
electronics?

hidden
device

Mask

materials: glitter, paint?
latex takes more than
1 hour in drying

Electronics

Design

Step 2. Skin first layer

Add vaseline / release to the mask

Make your design
Add a first **thin** layer of glitter/paint
Add more layers as necessary

Let it dry!

Step 3. The circuit

Be careful with the order:
Gemma D1 to Din first LEDs
LEDs → Dout to Din

Insulate: Add E600 to the components

Step 4. The code

Program the neopixels (adafruit masks)

<https://learn.adafruit.com/led-masquerade-masks/>

```
#include <Adafruit_NeoPixel.h>

#define PIN 1

// Parameter 1 = number of pixels in strip
// Parameter 2 = Arduino pin number (most are valid)
// Parameter 3 = pixel type flags, add together as needed:
//   NEO_KHZ800  800 KHz bitstream (most NeoPixel products w/WS2812 LEDs)
//   NEO_KHZ400  400 KHz (classic 'v1' (not v2) FLORA pixels, WS2811 drivers)
//   NEO_GRB     Pixels are wired for GRB bitstream (most NeoPixel products)
//   NEO_RGB     Pixels are wired for RGB bitstream (v1 FLORA pixels, not v2)
Adafruit_NeoPixel strip = Adafruit_NeoPixel(5, PIN, NEO_GRB + NEO_KHZ800);

// IMPORTANT: Avoid connecting on a live circuit...if you must, connect GND first.

void setup() {
  strip.begin();
  strip.setBrightness(100); //adjust brightness here
  strip.show(); // Initialize all pixels to 'off'
}

void loop() {
  rainbow(20);
}

void rainbow(uint8_t wait) {
  uint16_t i, j;

  for(j=0; j<256; j++) {
    for(i=0; i<strip.numPixels(); i++) {
      strip.setPixelColor(i, Wheel((i+j) & 255));
    }
    strip.show();
    delay(wait);
  }
}
```

Step 5. Assembly

Glue the circuit to the first skin layer.
Add more latex to covering.
(and glitter if necessary)
Let it dry!

Second Option
my first nail interface

TechNails Functionality

Other options

Electronics into a Belt

Water Interfaces

Workshop materials

1 Arduino Uno

5 RFIDs

1 RFID Reader and shield

Brushes

Fake nails

Acrylic Nail liquid, glue and powder

Wire

Wire strippers, flush snips, and tweezers

Soldering iron and solder

Multimeter

Step 1. Plan it!

more
electronics?
How is the feedback?
Light, speaker, motors?

materials: Box? Belt? Aquarium?

Electronics
Design

Step 2. Hide NFC with nail's products

Dip your brush in the liquid monomer and then in the powder (small amount).
Place one bead of acrylic right on top of your fake nail.
Attach the NFC tag on the top of the nail.
Add another layer of acrylic powder and liquid.

Let it dry!

Step 3. The circuit

Soldering the connectors to the Shield's pins
Connect the speaker the pin 8 and GND

Step 4. The code

Program the NFC nails

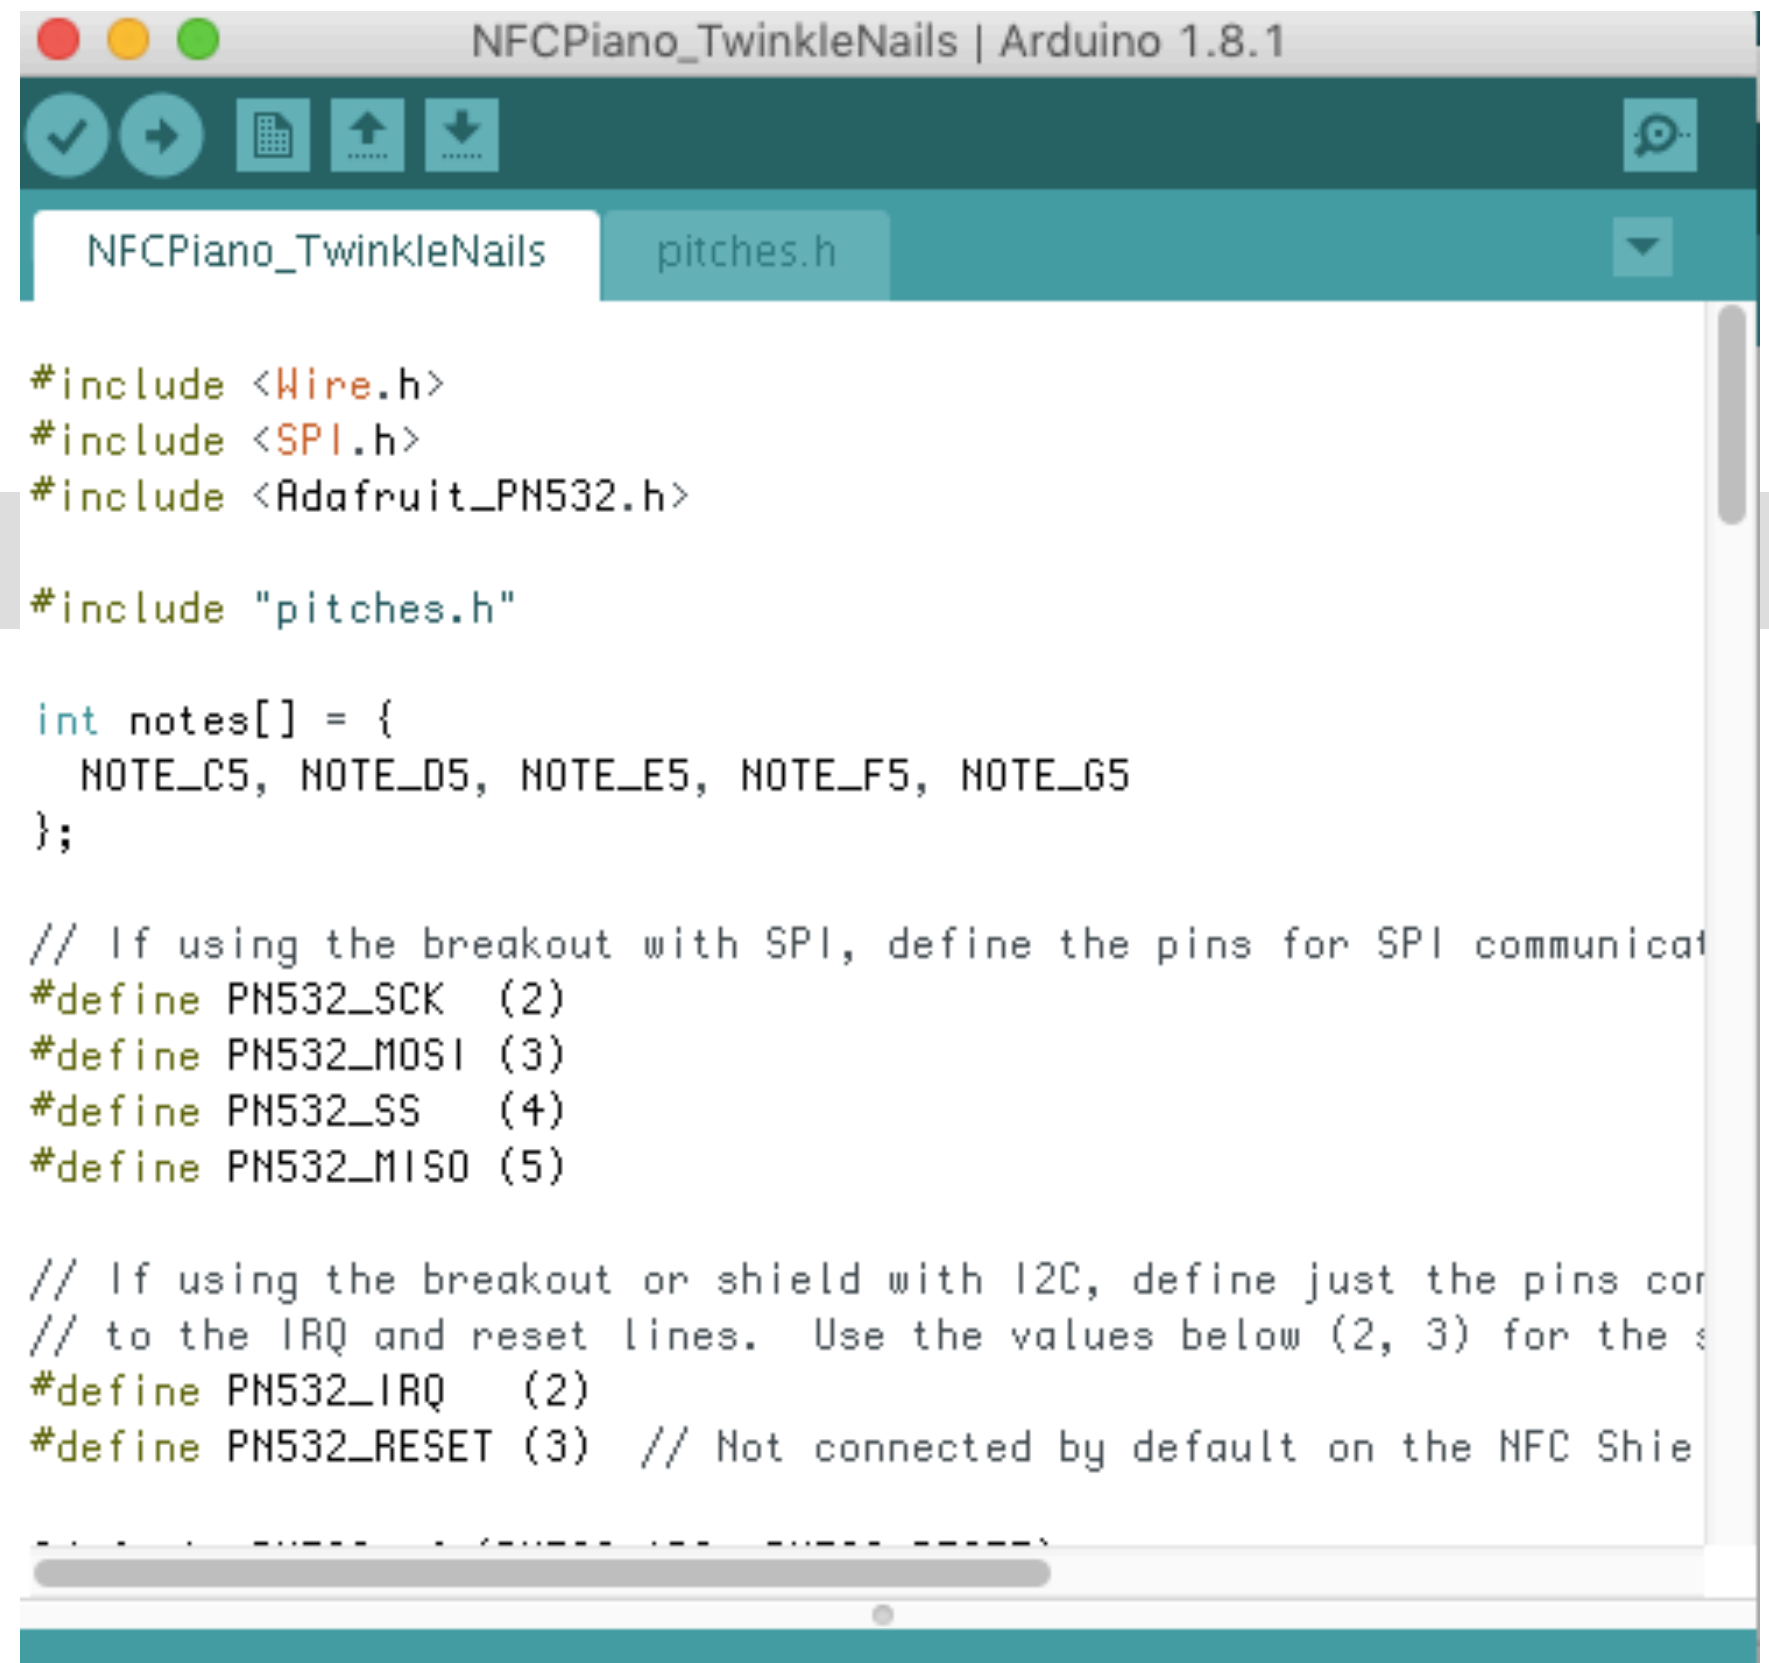

https://github.com/katiavega/BeautyTech_NFCTwinkleNails

Don't forget the PN532 library

<https://github.com/adafruit/Adafruit-PN532>

For more information of the Shield:

<https://learn.adafruit.com/adafruit-pn532-rfid-nfc/arduino-library>

```
NFCPiano_TwinkleNails | Arduino 1.8.1
NFCPiano_TwinkleNails pitches.h

#include <Wire.h>
#include <SPI.h>
#include <Adafruit_PN532.h>

#include "pitches.h"

int notes[] = {
  NOTE_C5, NOTE_D5, NOTE_E5, NOTE_F5, NOTE_G5
};

// If using the breakout with SPI, define the pins for SPI communication
#define PN532_SCK (2)
#define PN532_MOSI (3)
#define PN532_SS (4)
#define PN532_MISO (5)

// If using the breakout or shield with I2C, define just the pins connected
// to the IRQ and reset lines. Use the values below (2, 3) for the shield
#define PN532_IRQ (2)
#define PN532_RESET (3) // Not connected by default on the NFC Shield
```

Step 5. Test it

Add an ID to future identification.
Attach your nails using fake nails glue.

Assignment

- Use one of the project's option (carnival masks or tech nails).
- Personalize it with your project: change/add electronics (LEDs, acceremoter, etc).
- Improve the design: change the colors, add some crystals or other 3D elements.
- Presentation: explain your motivation and how you personalized your project.

Agenda

Fabricademy

Beyond wearables

Beauty Technology: from invisible to visible
on-body interfaces

Skin, hair and nails interfaces
